FOR IMMEDIATE RELEASE: Holden, MA, July 14<sup>th</sup> 2014

LumeWay Products, Inc., Announces Driver Fatigue Monitor Model EA430 with GPS.

HOLDEN, MA, JULY 14, 2014 - LumeWay, a developer and manufacturer of fatigue monitors, has begun production shipments of the EA430.

“Fatigue management is major safety issue with today’s transportation fleets” says Jeffrey Summit, President at LumeWay. “This product will allow our customers to prevent accidents” continues Summit. “Our team of engineers and safety experts has developed this technology to warn drivers before accidents occur due to drowsiness or falling asleep at the wheel. The EA430 has the added feature of a GPS module that allows a simpler means of setting the minimum speed. This will allow for more accurate control of the fatigue alarm, by preventing false alarms. This prevents diver/operators from consciously ignoring alarms and paying better attention to the task of driving.”

The EyeAlert family of products can detect driver fatigue, distraction, or detect when a driver is not looking ahead at the road. This includes texting, ‘seeing the sights’ or distraction by other electronic equipment. The EA430 system compliments LumeWay’s current driver fatigue product line including the flagship EA450.

LumeWay brings several years of experience and expertise in the development of safety solutions for the transportation industry. For more information go to <http://www.lumeway.com/EA.htm>
